Personal profile

Full Stack Software Engineer, with a strong desire to learn from and contribute to a highly collaborative and inclusive environment, that follows an agile workflow with a culture of DevOps. Furthermore, I relish a challenge and in the next 3 years, aim to advance my leadership/technical skills to enable me to grow into a Senior/Lead Software Engineer role.

Proficiencies

- C# - 2 years developing Microservice .NET Architecture for REG tech start up.
- TypeScript – Multiple web development projects ranging from Nodejs/MYSQL back ends and React/Angular front-end work.
- SQL – Familiar with different flavours of SQL such as Azure SQL server and MYSQL.
- Git – Proficient and comfortable with CLI tooling.
- AWS/Azure – Experience interacting with different cloud platforms as a developer hosting application using Docker/Kubernetes to host said solutions.
- Agile/DevOps – These ideologies/methodologies have been my bread and butter of working the last few years.
- Open to new technologies and languages don't feel bound to a programming language, I believe my value lies in my approach to solving problems not any specific syntax being used for that.

Employment History

Earnd Software Engineer February 2021 – Current

- Financial wellbeing/Flexible pay application with a Typescript Nodejs backend stack and React front end. Actively Searching for new role due to parent company's administration.

REG Technologies Full stack Engineer October 2019 – February 2021

- Developed REG Tech Microservices in .NET using auto moq to solve business problems with a TDD approach
- Experience working with third party data e.g. Companies house/Credit safe API Integration and Csv data parsed from FCA (monthly ftp refresh).
- Small team size so had to be adaptable and pitch in with other areas such as infrastructure maintaining CI/CD Azure pipelines and our Kubernetes cluster
- Small amounts of experience with Angular Front-end most of time was spent in backend on this role 80% due to small need and skillset spread of team.

Fujitsu Services Graduate Software Developer Summer 2018 – October 2019

- Experience with interacting with large scale, on site customer projects like Post Office
- Developed rigorous understanding of Agile ways of working and ceremonies both through the role as a developer and Scrum Master.
- Took lead of a scrum team of Junior developer (Degree apprentices/Graduates) to aid the delivery of a change management solution for the Post Office built with React/MaterialUI/MYSQL/TypeScript
